

# Catalog de piese si paritate

Ca la IKEA: fiecare piesa are un cod. Mai jos sunt toate piesele cu cod, cantitate si de unde vine fiecare (o ai · o cumperi · din offcut). Apoi un tabel care verifica, bucata cu bucata, ca tot ce cer schemele de montaj exista in lista de cumparaturi. La final, ce mai trebuie luat.

## 1 Piese de lemn

Codurile ST GR JO DL PO BL CF PT se folosesc in toate desenele de montaj si in lista de cumparaturi.

|                                                                                                                                                                                                        |                                                                                                                                                                                        |                                                                                                                                                                                                    |                                                                                                                                                                                                     |

**Concluzie:** 16 din 21 de piese sunt complet acoperite. Cele 5 marcate sunt mai jos — niciuna nu opreste startul, dar **B1 (bulon polita)** trebuie comandat la lungimea corecta inainte de pasul cu grinda din spate.

5

## Ce mai trebuie luat

**B1**

### Bulon M12 lung pentru polita

Cosul are M12×120 — bun doar pentru baza (B2). Polita = bloc 100 + stalp 100 ≈ 200 mm, deci buloanele trebuie sa fie ~M12×200. Sunt 4 bucati (2 per polita).

→ Masoara grosimea reala la montaj, apoi comanda lungimea. Hornbach are seturi Dresselhaus M12 cu piulita inclusa (220 mm e cea mai apropiata).

**B4**

### Piulite M12

Nu se vand online pe Hornbach (doar seturi surub+piulita). Le iei din raft la magazin, langa suruburi. ~16 buc (baza + polita).

→ Iei la fata locului; staff-ul ti le potriveste pe surub.

**F3**

### Topcoat colorat

Grundul (F2) e incolor si nu tine de UV singur. Topcoatul da culoarea si protectia finala. Translucid (se vede lemnul, reaplici la ~4 ani) sau opac (tine ~8 ani, ascunde fibra).

→ Alegerea ta de culoare; il adaugi cand decizi.

**CF**

### Lemn pentru contrafise

Cele 6 contrafise + proptelele (PT) ar trebui sa iasa din offcut-urile de la stalpi si grinzi. Daca nu ajung, iei o grinda ieftina nerindeluita.

→ Verifica offcut-urile dupa taieri; cumperi doar daca lipseste.

H4

#### Suruburi dusumea — la limita

200 buc in cos, ~204 necesare (17 scanduri × 6 joiste × 2). Decupajul pentru copac mai economiseste cateva, deci ar trebui sa ajunga la fix.

→ **Daca vrei margine, mai iei o cutie mica de 5×60 inox.**
